

Anugrah Surya Putra

Mobile Engineer

📍 South Jakarta, Jakarta ✉ anugrahsputra@email.com 🌐 itsyourboiputra.is-a.dev 📺 anugrahsputra 🎧 anugrahsputra

Summary

Mobile Engineer with 2+ years of experience building and maintaining cross-platform applications using Flutter and Kotlin Multiplatform. Strong focus on clean architecture, production stability, CI/CD workflows, and close collaboration with backend teams to deliver reliable, high-quality mobile experiences.

Education

Universitas Pasundan, BE in Informatic Engineering – Kota Bandung, Jawa Barat

Sept 2018 – June 2023

Experience

Mobile Engineer, BRIK Indonesia – South Jakarta, Jakarta

Aug 2025 – present
5 months

- Maintained two Flutter mobile applications: BRIK Hub (internal business operations) and PaintPro Loyalty (customer-facing loyalty program).
- Collaborated closely with backend engineers to define requirements and deliver incremental features across both applications.
- Diagnosed and resolved production issues, improving app stability, responsiveness, and overall user experience.
- Refactored shared components and business logic to eliminate code duplication, improving maintainability and long-term scalability.
- Owned app release management across app stores, including versioning, deployment, and release coordination.
- Led the integration of Shorebird code push into the CI/CD pipeline, reducing dependency on Play Store releases for hotfixes by ~80% through over-the-air updates.
- Monitored app performance and user behavior using Firebase Analytics, Crashlytics, and Performance Monitoring to proactively improve stability and UX.

Mobile Engineer, PT. Semesta Arus Technology – South Jakarta, Jakarta

June 2024 – July 2025
1 year 2 months

- Developed cross-platform mobile applications using Flutter and Compose Multiplatform (CMP) for iOS and Android, ensuring consistent user experiences across platforms.
- Participated in the full development lifecycle from design to deployment, aligned with SDLC best practices.
- Applied clean architecture principles to design scalable and maintainable application structures, improving code quality and development efficiency.
- Collaborated with backend engineers to integrate RESTful APIs and ensure system reliability.
- Diagnosed and resolved critical bugs and performance issues, reducing crash rates and improving application stability.
- Implemented new features and enhancements in existing applications to improve usability and functionality.
- Contributed to technical documentation to support knowledge transfer and long-term maintenance.

Projects

Change Project Name

An open-source CLI tool to rename Flutter/Dart projects and automatically update package references and imports.

- Developed a CLI utility to automate the refactoring of Flutter/Dart project names, reducing a multi-step manual process into a single command.
- Implemented recursive file system traversal to scan project directories while intelligently ignoring build artifacts (.dart_tool, build/) to optimize performance.
- Engineered safe refactoring logic that updates pubspec.yaml configurations, refactors package imports across all .dart source files, and modifies internal package configs (package_config.json).
- Built robust validation pipelines using RegEx to ensure naming convention compliance and added a "dry-run" mode to preview destructive file changes before execution.
- Integrated process management to automatically trigger Flutter toolchains (flutter clean, pub get) via subprocesses upon successful renaming

Sept 2025 – present

Cosmic App KIOSK Touchscreen

Information display app for DPR RI written in kotlin and jetpack compose

- Developed a KIOSK touchscreen applicaton for Bureau of Publishing (Biro Penerbitan) DPR RI.
- Implemented device power schedule feature to automate power on/off operations
- Implemented auto-return mechanism feature that resets WebView to the base URL after a period of user inactivity.
- Implemented server side real-time function call using websocket.
- Implemented heartbeat mechanism to regularly signal application status to the server

Oct 2024 – Feb 2025

E-Market Mobile App

Mobile E-Commerce app for UMKM in Malingping District

- Conductue system analysis and user requirement gathering to determine the main features of the app.
- Designed and developed dual-sided e-marketplace apps (Seller app and Buyer app) using Figma and Flutter.
- Utilized Firebase for backend integration and data storage.
- Integrated Google Maps API fro user location services.
- Perfomed blackbox testing to ensure application features, achieving a 100% test pass rate for the seller app and 95% for the buyer app.

Dec 2022 – May 2023

Skills

Languages: Dart, Kotlin, Go, Java

Mobile Frameworks: Flutter, Jetpack Compose, Compose Multiplatform

Tools: Android Studio, VS Code, Neovim, Figma

Skills: Problem Solving, Performance Optimization, CI/CD Workflows, Third-Party Integration
